Mac Install Hangs At Looking For Incompatible Software

The software is moved to a folder named Incompatible Software, at the top level of your Mac startup disk. If you want to use one of the incompatible apps, get an updated version that's compatible with your new OS. You can also check with the app developer to find out if they have a new, compatible version or plan to release one. Mac Install Hangs At Looking For Incompatible Software Windows 10Mac Install Hangs At Looking For Incompatible Software ComputerWhen you upgrade macOS or migrate content to a new Mac, software known to be incompatible with the new macOS version is set aside and won't run on your updated system. Apps in the Mac App Store list their compatibility and system requirements on their product pages.
